AOS-CX 10.13 Update: Source Interface for SFTP/SSH

Priyadarshini Senthilkumar , TME

Nov 2023

Source Interface for SFTP/SSH

```
ip source-interface ssh-client interface <>
ip source-interface ssh-client <IP>
ipv6 source-interface ssh-client <IP>
ipv6 source-interface ssh-client <IP> vrf <vrf name>
```

SSH Secure Remote Management

- Admins control which network interface Aruba switch uses for secure connections.
- Enhances security and management session consistency.

```
ip source-interface sftp-scp interface <>
ip source-interface sftp-scp <IP>
ipv6 source-interface sftp-scp <IP>
ipv6 source-interface sftp-scp <IP> vrf <vrf name>
```

SFTP Secure File Transfer:

- Ensures file transfers adhere to predefined network paths.
- Specifies network interface for secure file transfers to and from remote server.

Why is it important?	SFTP and outgoing SSH client commands to use one interface IP rather than any from the switch for easy identification of the switch in traffic
	It can align firewall rules to permit traffic originating from a specific interface, facilitating firewall traversal

Note : Source-interface is not configurable on management VRF

Thank you
