What are the various RADIUS response codes?

Question

What are the various RADIUS response codes?

Answer

Product and Software: This article applies to all Aruba controllers and ArubaOS versions.

0 - Auth_OK
1 - Auth_Fail: user/password combination is not correct.
2 - Auth_Timeout: auth request timed out; no response from server.
3 - Internal Error: internal error in auth; should engage engineering.
4 - Bad Response from server: check shared secret.
5 - No Auth Server configured.
6 - Challenge from server: does not necessarily indicate an error condition.
