Why does the AP-125 not show "Real time FFT" when it is used as a **spectrum monitor**?

Product and Software: This article applies to ArubaOS 6.0 and later.

AP-12x and RAP-5WN have limited support for **spectrum monitoring**. Real time FFT, FFT Duty Cycle, swept **spectrum**, and interface source classification are not supported.

AP-105, AP-92, and AP-93 implement full support, and all the charts should work for these APs.
